PLANT ROOTING STRATEGIES: Student Assessment

Create a guided tour through the *Canopy in the Clouds* panoramas that allows visitors to view two different species of epiphyte (e.g., bryophyte, bromeliad, orchid), one hemi-epiphyte (e.g., strangler fig), and a terrestrial plant (e.g., fern, cedar tree). For each species, include:

- general name (e.g., bromeliad)
- the panorama number
- the “view setting” (ground view or canopy view)
- other reference points (such as a person or a hotspot link) to help guide your visitor to the appropriate plant
- a drawing of the plant
- a description of the plant’s rooting strategy

Please do not direct visitors to hotlinks that we used in our classroom activity. You should find new examples of these organisms on your own.
